Headlands Hotel

New Construction (2016)

Austinmer (Wollongong), NSW, Australia

OWNER/CONTRACTOR

Stevens Group

APPLICATOR

Wetspot Waterproofing
Leakfree Waterproofing

DISTRIBUTOR

KRYFIX

PRODUCTS USED IN APPLICATION

KGM-100, KGM-200, KGM-300 Liquid Membranes, Polyglass Polyfond Kit Drain

BACKGROUND

Located at Austinmer in Wollongong's northern suburbs, this development, completed by Stevens Group, comprises a hotel, restaurants and 61 serviced apartments.

KRYFIX provided KGM liquid membranes and Polyglass sheet membranes to this project.

SOLUTION

KGM Liquid Membranes are coated over surfaces to form a seamless watertight finish and cures to provide you with dependable waterproofing protection.

KGM-100, KGM-200 and KGM-300 were applied to the outdoor terraces, retaining walls and bathrooms of the Headlands Hotel. KGM-100 is a moisture curing polyurethane membrane designed to waterproof most non-exposed external wet areas for above and below ground construction. KGM-200 is a water-based polyurethane membrane that is designed for both internal & non-exposed external applications. KGM-300 is a UV stable acrylic membrane formulated for both exposed and non-exposed outdoor applications.

Polyglass Polyfond Kit Drain was applied to the planter boxes. Polyfond Kit Drain is a stud membrane made from High Density Extruded Polyethylene (HDPE) and polypropylene which provides excellent rainwater drainage capacity.
